

Asha Rao

asha.rao@example.com | github.com/asha-rao-dev | Bengaluru

SUMMARY

Backend engineer focused on agentic systems.

SKILLS

Python, FastAPI, asyncio, PostgreSQL, Redis, Docker, GCP, LangGraph, LangChain, pytest

PROJECTS

Support Triage Agent | LangGraph, FastAPI, PostgreSQL, Redis

- Built a stateful multi-agent workflow with LangGraph that routes tickets, retrieves answers via RAG and calls tools (function calling) to update the CRM.
- Implemented retrieval with embeddings in pgvector, hybrid search and reranking; evaluation harness measured precision@5 improving from 0.61 to 0.83.
- Async FastAPI backend with Redis caching, retries with exponential backoff and structured logging; deployed on GCP Cloud Run with Docker and CI/CD.
- Wrote pytest unit and integration tests covering 85% of the agent graph.

Document QA Service | Python, LlamaIndex, FAISS

- Designed a RAG pipeline that ingests 5,000 PDFs, chunking and embeddings stored in FAISS, with an evaluation set to track hallucination rate.

EXPERIENCE

Backend Intern, Nimbus Labs

- Developed Python microservices with FastAPI and PostgreSQL handling 2k requests per minute.

EDUCATION

B.Tech Computer Science, Sample University
